Notes

***Statistics were found using LoDown floor by floor to determine each enemy monster's level, and then hatching eggs of those monsters in the tower at said level and recording the values. Results are listed below and sorted by floor.**

***If Koh is below the level of a slain enemy monster he will gain double the normal experience. Experience is split between Koh and any familiars he has out (split experience is doubled if recipients are below level of slain monster).**

***Monsters CAN recover HP as turns pass much like Koh and his familiars regenerate. Depending on how long the fight goes be careful when relying too much on the HP values listed below - something to keep in mind.**

***Dragons in the tower have a slightly higher HP value than a Dragon raised normally (81-78). Best I can figure is that the Dragon's stats were calculated as a Level 1 Dragon and then scaled up to Level 29 with the Dragon's growth rate instead of being raised as a Kid to Level 20 and then a Dragon the rest of the way to Level 29. If that is the case then the ATK value I have listed is slightly off and the DEF value is off probably by quite a bit (the Dragon has very high DEF growth). The HP value is 100% correct however and has been tested multiple times.**

***Arachne has a weakened ATK and Block has a weakened DEF (due to their specific traits), a Cure-all Herb or Hazak/Shomoru Herb can restore those stats to full - useful as a Holy scrolled monster.**

***Naplass have drastically different HP values due to how their doubled HP trait works. Their HP can range from 83-166. They spawn in the tower at 83 and then gradually heal back up to 166 as turns pass in the tower. Due to this it's impossible to know what HP value they are currently sitting at unless one spawns right next to you in the tower.**
